Craig Stone, P.E.

Director,

Toll Division

Shuming Yan, P.E. Assistant Manager, Urban Planning Office

Washington State Transportation Commission July 14, 2010

The 2009 Budget Proviso

Mandates that the study, at a minimum, must include the following:

- The potential for value pricing to generate revenues for needed transportation facilities within the corridor;
- Maximizing the efficient operation of the corridor;
- •Economic considerations for future system investments.

Requires WSDOT to report the study findings to the Joint Transportation Committee by September 30, 2010.

Preliminary Findings

 Tolling is expected to contribute a substantial amount to fund the project <u>construction</u>, depending on phasing and financing assumptions.

- SR 509: 40% to 90%

- SR 167: 20 % to 50%

- Tolling is expected to create an opportunity for phasing and reducing the initial construction cost:
 - SR 509: improvements on I-5 can be scaled back significantly without worsening I-5 operation.
 - SR 167: building one side first and making it a two way operation appears to be a sensible option.
- Stakeholders are generally supportive of using tolls to partially finance the projects.

Background

- Both projects are ready to go (with EIS and ROD).
- Both were in R-49, R-51, and RTID funding packages.
- Both got partial funding from the Nickel and TPA for design and some ROW acquisition:

- SR 509: \$86m

- SR 167: \$133m

- Both started off with 6 lane design, 2 GP and 1 HOV/direction, and reduced to 4 lanes in the current design/full build.
- Both have strong freight presence and make strategic port connections.
- Neither is funded for construction.

SR 509 Options Studied and Key Findings

SR 509 Current Design Configuration

- Two lanes per direction w/SB auxiliary lane from S. Airport Access Rd to I-5.
- New connection to the airport.
- Extensive CD/Auxiliary lanes and interchange improvements on I-5.
- New 228th St connection.
- Updated cost: \$923 million in YOE.

SR 509 Toll Concepts

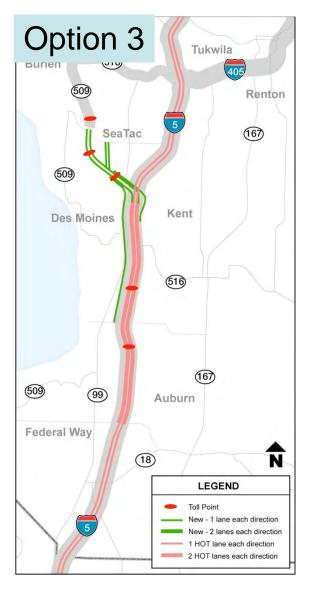

SR 509 Toll Concepts Cont'd

SR 509 Roadway, Toll Equipment, Operation & Maintenance Costs (in \$1,000,000s)

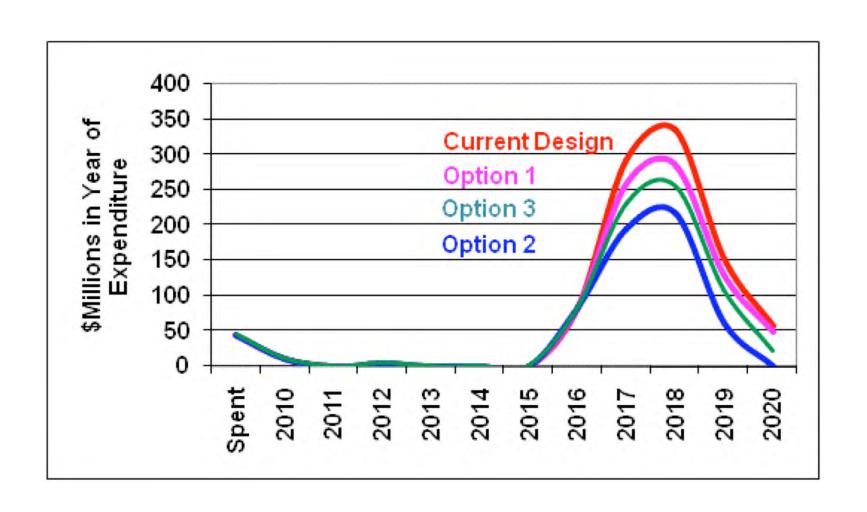

Cost Items	Current Design		Option 1		Option 1a		Option 2		Option 3	
ROW, PE and CN	\$	923	\$	809	\$	809	\$	557	\$	703
Annual M & O Cost	\$	0.3	\$	0.2	\$	0.3	\$	0.4	\$	0.6
Repaving cost every 14 years	\$	3.9	\$	3.6	\$	7.5	\$	1.8	\$	6.2
Initial toll capital & const. cost	\$	7.1	\$	6.1	\$	16.0	\$	33.3	\$	35.0

Note:

ROW, PE and CN for all the options exclude \$63m already spent

PE, ROW and CN costs are in year of expenditure dollars, annual and reocurring costs in 2010 dollars

SR 509 Extension Expenditure Cash Flow Assumption

SR 509 Revenue Focused Toll Rates

Time periods	Option 1	Option 1a	Option 2	Option 3
AM Peak	\$1.0-\$2.0	\$1.5-\$2.0	\$1.0-\$3.5	\$1.5-\$3.5
Midday	\$1.50	\$1.75	\$2.25	\$2.00
PM Peak	\$2.0-\$4.0	\$2.0-\$4.0	\$1.0-\$5.0	\$2.0-\$5.0
Evening	\$1.0-\$2.0	\$1.5-\$2.0	\$1.0-\$3.0	\$1.5-\$3.0
Night	\$1.00	\$1.50	\$1.00	\$1.50

Note:

- •Toll rates are in 2008 dollars. Rates are preliminary and subject to change as roadway configuration and toll assumptions change. Any future toll rates would be set by the Washington State Transportation Commission.
- •All vehicles except transit are assumed to pay tolls to use the extension and the existing SR 509 if it is also tolled.
- •HOV 3+ are exempt from paying tolls to use I-5 HOT lanes.

Financing Assumptions

- Maximum maturity of 30 years.
- Current Interest Bonds (CIBs) & Capital Appreciation Bonds (CABs) were assumed to tailor debt service repayment to a growing revenue stream.
- 1.50x debt service coverage.
- Average interest rate of 7.0% for CIBs & 7.75% for CABs.
- Issuance cost are 0.70% for CIBs & 1.2% for CABs.
- Bonds are issued annually throughout the construction period.

SR 509 Extension Financial Analysis Results:

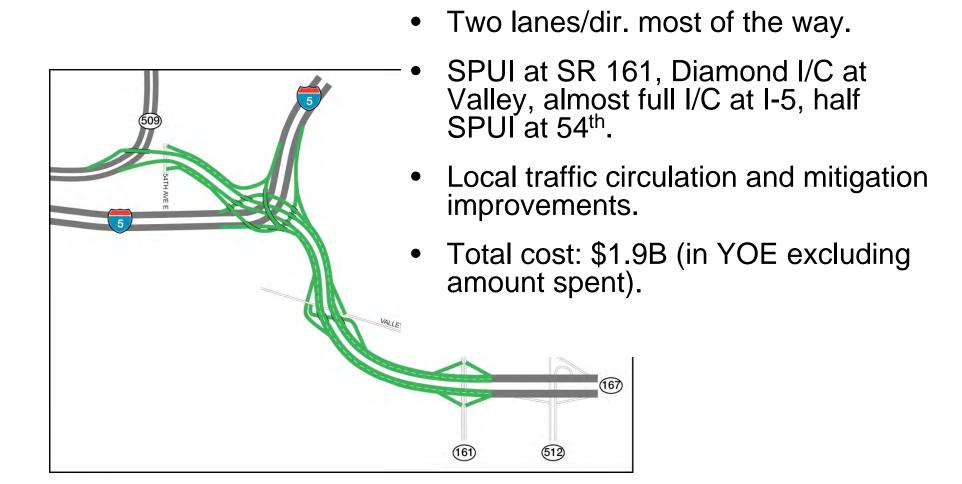

0.4	Fundin	g Needs (YOE \$s)	Toll Funding C	Total Remaining		
Options	Total Upfront Design ROW /Build		Net Toll Funding Range	% of Design/Build	Funding Gap		
Current Design	\$930 M	\$120 M	\$810 M	\$310 M - \$355 M	38% - 44%	\$575 M - \$620 M	
Option 1	\$815 M	\$120 M	\$695 M	\$310 M - \$355 M	45% - 51%	\$460 M - \$505 M	
Option 1a	\$825 M	\$120 M	\$705 M	\$425 M - \$490 M	60% - 70%	\$335 M - \$400 M	
Option 2	\$585 M	\$120 M	\$465 M	\$295 M - \$340 M	63% - 73%	\$245 M - \$290 M	
Option 3	\$735 M	\$120 M	\$615 M	\$505 M - \$585 M	82% - 95%	\$150 M - \$230 M	

Notes: State Fiscal Year is from July 1 to June 30, e.g., FY 2016 = 7/1/2015 to 6/30/2016

- Analysis assumes that toll bonds are issued when there is a commitment to build, in this case FY 2015.
- All Options have unfunded capital needs beginning in fiscal year 2015 and ending in fiscal year 2020.
- The low end of the funding range represents a 10% reduction in gross toll revenue to account for uncertainty.
- HOT lane (from the extension to S 317th) gross revenue is about 10% of the total gross revenue
- The total project capital costs for all options exclude the amount already spent on P/E and R/W.
- The total Remaining Funding Gap includes the remaining upfront ROW cost

SR 167 Extension Financial Analysis

	Fundin	ng Needs (Y	′OE \$s)	Toll Funding Co	Total Remaining			
Options	Total	Upfront PE/ROW	Const.	Net Toll Funding Range	% of Const. Cost	Funding Gap		
Full Build	\$1,910 M	\$280 M	\$1,630 M	\$325 M - \$370 M	20% - 23%	\$1,540 M - \$1,585 M		
Option 1	\$923 M	\$204 M	\$719 M	\$310 M - \$360 M	43% - 50%	\$563 M - \$613 M		
Option 2	\$1,332 M	\$261 M	\$1,071 M	\$350 M - \$405 M	33% - 38%	\$927 M - \$982 M		
Option 2a	\$1,336 M	\$261 M	\$1,075 M	\$390 M - \$455 M	36% - 42%	\$881 M - \$946 M		
Option 2b	\$1,358 M	\$261 M	\$1,097 M	\$415 M - \$480 M	38% - 44%	\$878 M - \$943 M		
Option 2c	\$1,362 M	\$261 M	\$1,101 M	\$465 M - \$545 M	42% - 49%	\$817 M - \$897 M		

Notes: State Fiscal Year is from July 1 to June 30, e.g., FY 2016 = 7/1/2015 to 6/30/2016

- Analysis assumes that toll bonds are issued when there is a commitment to build, in this case FY 2015.
- All Options have unfunded capital needs beginning in fiscal year 2015 and ending in fiscal year 2020.
- The low end of the funding range represents a 10% reduction in gross toll revenue to account for uncertainty.
- The total project capital costs for all options exclude the amount already spent on P/E and R/W.
- The total Remaining Funding Gap includes the remaining upfront PE/ROW cost

Preliminary Conclusions & Next Steps

- Tolling could contribute a substantial amount to fund the project <u>construction</u> while helping reduce initial phasing scope and construction cost.
- Stakeholders are generally supportive of using toll to partially finance the projects.
- Right of way need to be secured before bond issuance to reduce financing cost.
- More comprehensive toll study needs to be conducted as well as environmental clearance need to be addressed as a next step.
